proofforge

A rule of inference, and the proof it ends.

ProofForge logo guide, version 1.0, accepted on 2026-10-31. The symbol is an inference rule as logicians write it: two premises above the line and the conclusion below. The conclusion is the block, the end-of-proof mark: proved. It also reads as a fraction, the arithmetic that financial code gets wrong.

Construction

Premises	`14, 22, 30 x 12` and `56, 22, 30 x 12`, radius 1.5
Inference line	`8, 43, 84 x 7`
Conclusion	`39, 60, 22 x 22`, radius 1.5
Ink box	x 8 to 92, y 22 to 82 on a 100 unit grid
Small cut	48 px and below: line `8, 42, 84 x 10`, gaps of 8, edges on whole pixels

Colour in the mark

Primary on light: Ink bars and line, Forge deep block. Reversed on Void: `#F2F5F8` bars and line, Forge block. Mono ink and mono white: one colour throughout.

The block is the one accent in any view. Verified and Refuted belong to verdicts and never enter the mark.

proofforge proofforge proofforge proofforge

Primary on Paper, reversed on Void and Graphite, mono ink for one-colour print, mono white on photographs and mid-tone grounds.

Lockups

The alignment rule

In the horizontal lockup the mark is 0.78 of the wordmark font size high, and its vertical centre is level with the wordmark ink centre: the midpoint between the top of the f and the bottom of the p and g, 0.25 em above the baseline. The gap from mark to wordmark is 0.33 em.

At font size 100 the mark runs from `-64` to `14` and the wordmark ink from `-70` to `20`; both centres are `-25`. Positions come from the outlined glyph bounds, and the validator checks every rendered lockup.

Choosing a lockup

- Horizontal is the default, for headers, documents and app bars.
- Stacked suits square placements: the mark, 1.25 em high, centred above the wordmark.
- The symbol alone is for avatars, favicons and app icons.
- The wordmark alone is for places that already show the symbol nearby.

Space and size

Clear space: half the symbol height on every side. Minimum sizes: symbol 16 px on screen and 5 mm in print; horizontal lockup 120 px wide; wordmark alone 90 px wide.

Colour and type

Void
#05070B
Page ground in dark

Graphite
#0E131B
Cards and panels on dark

Steel
#1C2532
Card edges on dark

Mist
#A9B4C2
Body text on dark

Forge
#FF9A3C
The block on dark; one accent per view

Forge deep
#D45F00
The block on light; large accents on light

Ion
#5BE4F0
Proof graphs and Lean code on dark

Paper
#F6F7F9
Page ground in light

Verified
#3DDC97
The verified verdict only

Refuted
#FF5D5D
The refuted verdict only

Ink
#0B0F15
Text and mark on light

Slate
#4A5462
Body text on light

Supporting values: #F2F5F8 for the mark and headings on dark, Hairline #E1E5EB for card edges on light, white for cards on light. Contrast: Mist on Void 9.6:1, Slate on Paper 7.2:1, Forge on Void 9.5:1. Forge deep on white is 3.9:1, so use it for the block and large type only, never small text.

Type

Every fix carries its *proof*.

Instrument Serif: page headlines only.

0 of 247, $3.06

Space Grotesk: the wordmark, figures and section titles.

Six independent kernels check the proof.

Inter: interface and body, 400, 500 and 600.

```
theorem req_batch_keeps_value : ...
```

JetBrains Mono: Lean, hashes and Passport readings; Ion on dark grounds.

Labels are sentence case. No uppercase eyebrow labels above headings.

Do not

- Change the grid, the gaps or the order of the parts.
- Set the wordmark in a live font, or restyle it.
- Align the mark to the baseline or the x-height; use the ink centre rule.
- Use Verified, Refuted or Ion in the mark.
- Add a second accent next to the Forge block.
- Rotate, outline, add gradients, glows or shadows to the static mark.
- Crowd the lockup inside its clear space, or set the primary lockup on photographs or busy grounds.
